EDUCATION

Universidad Nacional Autónoma de México (UNAM)

Grad Date: December 2027

B.S. in Computer Engineering

Relevant Coursework: Software Engineering, Machine Learning, Data Structures, Operating Systems.

Università di Pisa

Sep 2026 – Feb 2027

Academic Mobility Program – Information Engineering

PROFESSIONAL EXPERIENCE

S&P Global

June 2026 – Present

Software Development Intern

- Developing end-to-end API-driven dashboards and internal production tools using React, Node.js, HTML, CSS and Python, integrating robust data modeling to extend core platform functionalities.
- Extracting and transforming raw datasets via Python to generate actionable Business Intelligence insights for production environments.

BMV Group (Mexican Stocks Exchange)

Jan 2026 – May 2026

Internal Audit & Information Security Process Intern

- Developed and implemented automated hardening processes for corporate systems using Python, Bash, and PowerShell, optimizing security baselines and reducing manual configuration overhead.
- Participated in technical risk analysis and vulnerability assessments on internal platforms to ensure the integrity of production environments.
- Collaborated with cross-functional teams to align security protocols with technical audit standards.

PumaHat Cybersecurity Team

Jan 2024 – June 2026

Technical Lead & Cybersecurity Instructor

- Mentoring students in engineering fundamentals and offensive security, focusing on vulnerability exploitation and penetration testing methodologies.

PROJECTS & HACKATHONS

Start CDMX Hackathon 2026 — Finalist (Emissia)

Jan 2026

- Engineered a climate action prototype within a 48-hour sprint utilizing Lovable's tech stack to automate the monitoring, reporting, and verification (MRV) of CO2 emissions for supply chains.

Nextwave Hackathon 2026 — Participant (Savvy)

Aug 2026

- Built the data pipeline for Savvy, a payment-anomaly detection platform, normalizing live transaction data into a dual-store architecture (DuckDB/Parquet for historical baselines, SQLite for real-time detection) — shipped in one weekend with a 4-person team.

Z80 Processor Emulator

June 2025

- Engineered a functional Z80 processor emulator, utilizing linear data structures to implement memory management and simulate instruction execution cycles via Java.

ACHIEVEMENTS

- **Intern Innovation Challenge Winner (S&P Global):** Recognized for developing a top-tier technical solution during the 2026 summer internship program.
- **HackMex Finalist:** Ranked among the top national teams in ethical hacking (8th Edition, 2025).
- **TOEFL IBT:** Scored 92/120 (March 2025).
